PnUseries

As providing the screens with 256 colors and upgraded HMI system configurations, we've enhanced its functional and competitive strength.

High-speed communication

- 32-bit processor adopted for high-speed graphic process
- Maximum communication speed: 115,200bps

Easy operation

- Direct input of controller address and variable libraries support
- Recipe function for batch processing of parameter data
- Data logging for running data back-up

Various image functions

- Various products: 4 products/7 features (12.1", 10.4", 7.5", 5.7")
- Screen configuration with 256 colors
- Various image functions available (background bitmap, transparent bitmap, etc.)
- Various network configurations thanks to various communication drivers and communication functions

*1 Monochromatic bitmap use only *2 Simultaneous use of RS-232C and RS-422 ports is not allowed

PNU-30 series

32-bit RISC CPU enables a high-speed processing

256 colors support

- Equivalent process speed
- in bitmap and general diagram Improved calculation speed with
- multi-thread process
- Max. 115,200bps baud rate support

Numeric display

Data input function

Data input using TENKEY

Input range limit

Password encrypted

Min/max value of data setting

- Numeric data display: DEC, HEX and BCD type
- Displays data with 8 different colors depending on the numeric range variance
- Data, read from controller, can be displayed after calculation
- ASCII CODE, read from PLC or controller, can be displayed with characters

Extended memory capacity

		-	
T	1		Ċ.

- Uses flash memory (battery back-up not required)
- Screen save memory with 1~4MB
- Enhanced memory efficiency
- 2048-word buffering for data process
- 256K memory for data logging and recipe
- Screen save and logging memory extension possible (when required)

Touch and lamp function

Caption

Displays 2 letters according to the status (ON/OFF) of devices when using touch/lamp tag

Touch color

Displays the status (ON/OFF) of device with colors after operation of touch button with lamp function.

Ø Data lamp

Displays lamp with 8 colors, according to data range, while monitoring data

Maximum 10 functions can be set up with one touch tag

Various network configurations

- Built-in RS-232C/422 communication ports
- Connecting to PLC enables communication diagnosis
- 1:N communication using RS-422 port
- Built-in printer port (PMU-730/830)
- N:1 communication using Fnet
- Ethernet, Profibus-DP, DeviceNet and CC link communication available (option module is under development)

PMU series

PhU-30 series

Graph function

Trend graph

- Input value change is visually shown with the time axis
- 10 data can be set up with one graph
- Logging data and recipe data trend available

Meter graph

to the controller

production environment

- Sets the lowest/highest value of data and displays current data in rate
- Preset warning color is shown when data are out of range

e When work changes, running data are batch-transferred

• Analog data (voltage, current) display

Running data of each work are stored in PMU

Converts the setup data into MS EXCEL format High-performance under a varied and small volume

Recipe function

Data logging

- The data generated during operation are stored in PMU
- Periodic or conditional data logging
- Output the stored in PMU can be saved in PC using PMU Editor
- Converts logging data in PC into an MS EXCEL report

Various bitmap functions

256-color bitmap support

- A realistic screen with 256 colors
- A 256-color bitmap file display available
- Spectacular graphics using various colors
- Various functions using bitmap

Bitmap touch

Calls other bitmap according to the status (ON/OFF) of device after touch operation

Ø Bitmap lamp

Displays other bitmap according to the bit status (ON/OFF) while monitoring it

Background bitmap

Draws pictures on screen with a background bitmap of the same screen resolution

Transparent bitmap and lettering function Does not display the unnecessary part of bitmap and background letters

Features

- 12.1" TFT 256 colors
- 🥑 32-bit RISC CPU
- 800x600 screen resolution
- 4MB flash memory for saving screen data
- Built-in RS-232C/422 communication port

Program downloading port

- Built-in printer port
- Analog touch type
- Data logging function
- Recipe function

Features

- 32-bit RISC CPU
- 640x480 screen resolution
- 4MB/2MB flash memory for saving screen data
- Built-in RS-232C/422 communication port

Specifications

NO	Name	Specifications
1	Switch	Main power switch
2	Power port	Main power port of PMU (AC85~265V)
3	RS-422 port	5-pin RS-422 serial communication port

10 LG Industrial Systems

 Data logging function Recipe function

2MB/1MB flash memory for saving screen data

PMU-330TT 5.5 " TFT 256 Colors

PMU-Editor

Features

- Runs on Windows 95/98/NT/2000/XP
- Project integrating environment for convenient use
- OS and font downloading for version upgrade
- Screen magnification support for detailed graphic design

PMU-Editor functions

Simulation

Tag ON/OFF, data input and monitoring are possible without connecting to PLC

Simulation on drawing If the status of a bit tag (ON/OFF) changes while drawing the screen, the screen changes can be displayed on PC monitor

Assigns direct/indirect devices

Simulation by connecting to PMU

of system configuration

RS-232C

Provides various libraries for the elements

Oata can be converted into MS EXCEL format

OS and font downloading

When you upgrade the OS of PMU, OS and font file can be downloaded without disassembling the hardware

Various built-in libraries

- Various built-in libraries make it easy to configure the screen
- According to the customer's needs, library registering is available

Thumbnail function

This function makes you see the screen you draw at a glance

- Finding a specific address Available to find a registered tag and its position in the screen
- Automatic saving function As setting up the automatic saving time, it saves data at every saving period
- Oata conversion function (EXCEL) Data such as tag list, logging data, parameter shift data and warning can be converted into MS EXCEL file

Cross reference function Displays a list of the PLC addresses where the item is referenced. You can modify and batch change PLC addresses if need be

PLC address display with a tag PLC addresses of registered tag in the screen are displayed on screen

Screen capture

Screen capture available without any other software

Network Configuration

1:1 Serial communication (Master)

One PLC connection to one PMU: PMU functions as Master

1:1 Serial communication (Slave)

One PLC connection to one PMU: PMU functions as Slave

1:N Serial Communication

Connects more than one PLCs to one PMU

* 1:N communication by using RS-422/485 should be organized as choosing identical PLC types

N:1 Communication

Connecting more than one PMUs to one PLC

* Fnet option board should be installed on PMU for N:1 communication.

		320x240 screen resolution
	PMU-330ST	5.7" STN 256-color display
		320x240 screen resolution
Communication card *	PMO-330F	Fnet communication card
	PMO-330E	Ethernet communication card
	PMO-330D	DeviceNet communication card
	PMO-330P	Profibus-DP communication card
	PMO-330C	CC Link communication card

Common

Configuration	Model	Content		
Cable	PMC-550S	Program downloading cable		
	PMC-422C	GOLDSEC-M loader communication cable		
Software	PMU-Editor	Software for PMU-830/730/530/330		

* Communication cards for PMU-730 are compatible with PMU-830 (under development).

Automation Equipment SYSTEM

Automation of production lines It's the first step toward becoming a successful business

LGIS provides the most up-to-date controllers and systems based on the accumulated experience in the field of electric & electronic technology and automation system installation.

Ever since we started manufacturing PLC (Programmable Logic Controller) and inverter for the first time in Korea, our LGIS automation equipment division has been leading the Korean automation industry. We provide the optimal automation environment with various machine modules and large-scale process controls. Further more, we have obtained a range of international quality standard certificates such as CE and UL.

In the area of process control, we have independently developed Korea's first DCS (Distributed Control System). It plays a pivotal role in process automation by integrating control and monitoring systems of various industrial sites. We supply high-tech process control systems that are verified through outstanding sales records.

As for the field of traffic control, we also provide (based on our state-of-the-art IT development and experience of having supplied the most number of systems in Korea) traffic control systems on the railway and road with reinforced safety and reliability for people to travel safely and pleasantly.

Project records

2001	 Set the sales record of 500,000 inverter units
	 Awarded 1st turnkey project for railway signaling & control in thailand (First time in Korea/Biggest export project: App. 17 billion won)
	 Supplied main boiler control system to Honam Thermal Power Plant #2 in Korea (System model: MASTER P-3000)
	Supplied burner control system to Yeongnam Thermal
	Power Plant #1 in the first time in Korea
	 Supplied PLC GLOFA System to Daewoo Motor's Gunsan automobile Assembly Factory in Korea
2000	Supplied inverter systems to Seoul subway lines #1 & 2 in Korea
	Supplied inverter systems to Incheon international Airport's fuel facility & buildings in Korea
1999	 Supplied water treatment control system and water resources management system to KOWACO (Seoul metropolitan wide area water works #5 project) in Korea
	 Developed & supplied database-type electronic interlocking system in the first time in Korea
1996~1997	Supplied the main control system to all the steel factories of pohang iron & steel Co. (#1 & #2 steel mills)
	Installed Korea's first advanced real-time traffic responsive control system (Seoul, Korea)
	Exported Korea's first real-time traffic control system and red-light traffic enforcement system (Dalian, China)
1995	Manufactured & supplied the ATC (Automatic Train Control) and CTC (Centralized traffic control) systems to Gyeongbu high-speed railroad in Korea
1994~1999	 Supplied the largest number of data logging systems to Pyeongtaek Thermal Power Plant #1, #2, #3, #4, Ulsan Thermal Power Plant #4, #5, #6 and Incheon Thermal Power Plant #3, #4 in Korea
1994~2001	Supplied main control systems to the energy centers of Pohang Iron & Steel co. and Gwangyang Iron & Steel co.
1993	Developed and supplied the first made-in-Korea TTC (Total Traffic Control) systems to the Korean national railroad (Metropolitan railroad)
1992~1996	• Supplied main control systems to all the sintering factories (plants #1,#2,#3,#4) of pohang iron & steel co.
1988~1995	Supplied the water treatment control systems to the five water purification plants of Seoul (Gwangam, Amsa, Yeongdeungpo, Dduk-do, Seonyu), Korea
1987	Supplied the group type interlocking equipment and CTC (Centralized Traffic Control) systems to the Korean patienal railrade (Centralized Value).

Research & Development

2001	Obtained the KEPCO standard certificate for high-efficiency inverters for the first time in Korea
2000	Developed new DCS (Distributed Control System) "MASTER P-3000NT"
	Developed RTU (Remote Terminal Unit) "MASTER-RTU"
1999	Developed high functional DCS (Distributed Control System) "MASTER P-2000i"
1997	Get to development of ATC & CTC systems for Korean- made high-speed rail technology (G7)
1996	Awarded the KT (Korea Good Technology) mark for the real- time traffic control and management system
	Introduced the international standard PLC GLOFA series for the first time in Korea
	Obtained the ISO9001 for inverters for the first time in Korea
1995	Awarded the new media grand prize for the DCS (Distributed control system) "MASTER P-3000"
	Developed an open type DCS (Distributed control system) "MASTER P-3000"
1994	Awarded the KT (Korea Good Technology) mark for inverters for the first time in Korea
	Obtained the ISO9001 for PLC units for the first time in Korea
	Obtained the ISO9001 for process control business and traffic control business
1993	Awarded the KT (Korea Good Technology) Mark for the DCS (Distributed Control System)
1992	Developed an artificial intelligent traffic controller for the first time in Korea
	Obtained the UL certificate for inverters for the first time in Korea
1991	Awarded the jang young shil award, the most prestigious award for the fields of R&D in Korea, for DCS (Distributed Control System)
1990	Developed Korea's first monitoring system
1989	Developed the first Korean made DCS (Distributed Control System)
1985	Developed inverters for the first time in Korea
1984	Developed PLC units for the first time in Korea
